

# Wagner 0050342 Viscosity Cup Standard

**\$12.74**  
**INCL. GST**

## Product Images

## Short Description

Wagner 0050342 Viscosity Cup Standard is used for testing the correct viscosity of paint before being applied with a Wagner Power Sprayer & Flexio Spray Gun.

## Description

Wagner 0050342 Viscosity Cup Standard is used for testing the correct viscosity of paint before being applied with a Wagner Power Sprayer & Flexio Spray Gun.

Wagner DIY sprayers will have a reference table in the manual and a recommended viscosity cup "run out" time for the material being sprayed. Generally the recommendation charts are very broad and does not cover the wide variety of paint materials on the market but the viscosity cup will assisted you when thinning material and once the correct thinning has been obtained keep a note of the viscosity cup run out time for later use.

**Extract example from the W140P Manual**

### Preparing the Spray Material

The paints usually need to be diluted for use with the spray gun. You will find guidelines for sprayable dilutions in the following viscosity table (viscosity = consistency of the paint). You can achieve the correct dilution by using the viscosity test cup.

Handling Table for Viscosity		
Spray Material	Viscosity: (Runout time in seconds)	
		
Thinner-soluble varnishes/ primers	20-35	20-45
Water-soluble varnishes / primers	20-50	20-60
Automobile spray paint	18-22	18-22
Wood preservatives, disinfectants, plant protectants, polishes, strippers, oils	undiluted	
Hammer effect enamel	25-35	30-45
Aluminium paints	20-30	20-30

### Measuring the Viscosity

Dip the viscosity test cup (Illus. 1) completely into the spray material. Hold the test cup up and measure the time (in seconds) until the liquid empties out. Compare the measured "runout time" with the Viscosity Table.

Wagner Part No. 0050342

Replaces Wagner Part No. 50342

Replaces Wagner Part No. 0209058

Replaces Earlex Part No. 03K0327
