\$1,652.26
INCL. GST

Product Images

Short Description

Atomex double diaphragm pumps with mixing agitator are the ideal low cost solution for spraying large paint volumes in a single session. Stand is designed to sit over a 20 litre drum.

Description

Atomex double diaphragm pumps with mixing agitator are the ideal low cost solution for spraying large paint volumes in a single session. Stand is designed to sit over a 20 litre drum.

The variable speed agitator is handy for products such as undercoat or metallic paint that requires constant stirring. The agitator can be set at a very slow speed to keep the paint product in suspension and avoid solids from falling to the bottom of the paint tin.

Sold as a bare unit it can be used in place of your existing pressure pot if you wish to draw paint product directly from a 20 litre paint tin.

This bare pump unit does not come with a hose or gun.

Features

- Max fluid pressure 80psi
- Double teflon diaphragms
- Rigide suction tube with strainer
- Variable speed paint agitator
- Air regulator
- Anti-Pulse spray dampener
- Recirculation hose
- Dual paint hose outlets
- 12 months warranty.
