## Product Images

## Short Description

The Graco LineLazer 130HS is the most preferred hydraulic workhorse airless striper/Linemarkers for your

most demanding jobs. The 130HS is the most rugged line striper that Graco manufactures - it is designed for professional line striping businesses who will use the LineLazer almost daily.

## Description

---

The Graco LineLazer V 130HS is the line marking machine to buy if you are not bothered with the "bells & whistles". The Graco 130HS two gun line marker is the little brother to the 200HS, it has no digital display or electronics just a simple hydraulic pump that works with the same reliability.

The Graco LineLazer V 130HS line marker can be used for a wide variety of line marking applications such as car parks, temporary road marking & airport taxi ways etc.

Coupled with the Graco Heavy Duty Line Driver (Part no. 262005) this transforms the machine from a heavy duty push line marker to a full ride on line marking system.

The Graco 130HS together with the Heavy Duty line driver can be used on airports for spraying taxi ways, threshold lines and even centre lines up to about 600mm wide used on many regional airfield runways around Australia.

The reliability of the Graco 130HS makes this the ideal machine for line marking applicators that demand reliability but don't want the expense and unnecessary extra features found on the Graco 200HS with slightly less overall weight.

Graco LineLazer V 130HS is capable of spraying waterborne line marking paints and also chlorinated rubber (solvent line marking paint) with ease. The piston pumps in these models are large enough to pass minor rubbish in the paint through the pump whereas a smaller pump may block or cause problems.

### **Graco LineLazer V 130HS Custom Line Marking Packages For City Councils -**

AA Spray have specialised in Graco line marking equipment since 1993 supplying government and councils all over Australia. We can supply Graco line marking equipment with modifications such as conditional registration packs fitted for working on public roads and car parks.
