

Graco 287030 Cleanshot Shut-Off Valve With RAC X 517 Tip

\$348.70
INCL. GST

Product Images

Short Description

Graco Cleanshot Shut-Off Valve is designed to stop annoying paint spits and dribbles when using an airless spray gun tip extension. This will fit onto any brand gun extension that uses 7/8" (G Thread) connections.

Description

The cleanshot shut-off valve when used on the end of an airless sprayer tip extension or heavy duty pole is designed to stop paint dribbles and follow on when the trigger is released. If you have ever sprayed with a gun extension you may have seen the small squirt of paint that continues from the end of the tip when you let go of the trigger, this is what the cleanshot shut-off valves eliminates.

The Graco Cleanshot Shut-Off valve also acts as a 180 degree swivel head where the angle of spray tip can be adjusted to suit the surface being sprayed. The cleanshot valve includes a Garco RACX 517 Tip and Tip Guard.

Pressure Rated to 3600psi

Graco Cleanshot Shut-Off Valve Includes –

Part No. LTX517 – RACX 517 Reversible Tip

Part No. 246215 – RACX Tip Guard
