Short Description

300mm number 0-9 stencil kits for line marking in car parks and roads. Designed for use with spray cans or airless spray, create clear customised signs for roads and car park marking.

Description

Atomex letter and number stencil kits in 300mm, 400mm & 600mm for line marking roads and car parks will help you create clear distinctive markings on concrete and asphalt surfaces.

Manufactured in 4mm MDF material, MDF is much better than plastic or aluminium as the paint tends to not smudge when removing the stencil.

The MDF material will slightly absorb the solvent or water from the paint making the board a little flexible when being used. Many customers have told us that this actually helps keep the board flat on the surface when spraying which avoids smudging and spray bleeding past the edges of the lettering.

Each 300mm Number 0-9 stencil kit includes two blank boards (blanking boards) which can be used when creating spaces between numbers or if you need to double or triple numbers the same.

300mm Number 0-9 Stencil Kit Specifications -

- Number height 300mm
- Overall board height 320mm
- Overall board width 260mm
- Complete 0-9 numbers
- Two blank boards for use when double numbers are required
- 12 boards to a complete kit
