## Product Images

## Short Description

Male Elbow Speed Control Push Fitting can be used for air, liquids and some inert gases. Push-in air line fittings allow fast connection and disconnection for compressed air circuits eliminating the need for tools.

## Description

---

Push-in fittings are used for connecting polyurethane or nylon tubing mostly in compressed air circuits but can also be used for some liquids and inert gas.

Rated to 150psi maximum working pressure and constructed of composite plastic, brass with stainless steel locking ring.

Push-in fittings require no tools when connecting or disconnecting tubing, simply push the tube into the fitting and it's locked into position. To remove the tube simply push the blue collar down back towards the fitting and pull the tube away.
