Product Images

Short Description

Atomex X-50WS Wide Spray reversible airless spray tips are made in the USA using the hardest tungsten carbide in the industry. Ideal for large painting projects where high volume coatings need to be applied covering a surface area at twice the width of a normal airless spray tip.

Description

Atomex X-50WS Wide Spray airless spray tips are made from the hardest tungsten carbide in the industry formulated to a Rockwell Hardness of 93 – a diamond's hardness is 100. We guarantee the longest tip life and superior pattern in the industry.

Available sizes for the Atomex X-50WS Wide Spray Airless Spray Tip

1219, 1221, 1223, 1225, 1227, 1231, 1233, 1235, 1239.

These tips are widely used by roof coating applicators where a high volume of paint needs to be applied as quickly as possible. The fan size of these tips is 24" Inches or 60cm almost doubling the usual airless tip coverage, making the job much faster saving time and money.

These tips can also be used with any electric, petrol and air driven airless sprayer for professional high quality paint spray finishes.

Seal alignment, the patented tip seal has a square opening that fits on the end of the tip handle. This unique feature allows you to easily insert the seal into the guard. Then simply twist the tip handle to line up the seal cavity accurately to receive the tip shaft. Quick accurate installation every time!
