Short Description

Atomex Spray Painters Air Dryer Gun with Adjustable Air Flow is designed for rapid drying of both water

borne and solvent based paints on small areas such as doors or fenders.

Description

Atomex Spray Painters Air Dryer Gun with Adjustable Air Flow is made from a super strong lightweight composite material with adjustable air valve and stainless steel sieve to filter particles.

The compressed air required for the dry-blowing is supplied at the air connection. By opening the inline air regulator, the blowing process is initiated. The air streaming through the specially shaped blowing slits causes an under pressure which sucks in further air in the area of the filter holder. The sucked in air is cleaned by the stainless steel sieve.

Atomex Compressed Air Water Separation Tank Filters are located under the tank lid, simply remove the lid and replace the filter.

Atomex Spray Painters Air Dryer Gun features -

- Increases air flow by 10:1
- Filter mesh to reduce dust and particles
- Adjustable air flow
- Working pressure 43psi
- Maximum pressure 98psi
- Air consumption 7cfm
- Weight 265g
- 1/4" BSP female air inlet

Atomex Part No. AX/14-960-105

AA Spray stock a full range of compressed air blowers, air regulators, air hose and air couplings with fast delivery Australia wide.
