Short Description

DeVilbiss Pro Air 1 Filter Regulator has a high capacity of 123 cfm air flow with two outlets and has been designed for use in the spray booth. Constructed using leading edge technopolymer materials, the ProAIR-1 is resistant to solvents and withstands the heat of the bake cycle (up to 80°C).

Description

DeVilbiss Pro Air 1 Filter Regulator Dual filtration eliminates dirt down to 5 microns from reaching the spray gun and like all ProAIR filter regulators, condensate can be removed from the filter bowl manually or semiautomatically on depressurisation of the system. Ideal for running a spray gun (not suitable for breathing air).

DeVilbiss ProAir1 Filter Regulator features –

- High air flows for conventional and compliant spray guns.
- Rolling diaphragm for rapid response and precision control.
- Tough, heavy duty construction for long service life.
- Multi-valved outlets for spray gun and air fed respiratory protection plus semi-automatic filter drains.
- Tamper proof, removable and lockable adjustment knobs.

DeVilbiss Pro Air 1 Filter Regulator Dual filtration eliminates dirt down to 5 microns and will filter air for spray guns but is not suitable alone for air breathing. It is recommended that a two or three stage filter system with at least a coalescer is used for air breathing.

DeVilbiss Part No. PROAIR-1

AA Spray stock a full range of DeVilbiss Air Fed Masks including tear off visor covers, belt filters and replacement activated carbon filters with fast delivery Australia wide.
