Short Description

100mm x 13mm Injection Packers Aluminium (50 Pack) incorporate a non-return ball valve located in the grease nipple which can be removed to relieve water pressure prior to injection.

Description

100mm x 13mm Injection Packers (50) are designed for injecting resin into concrete for the purpose of sealing cracks that leak water.

When fitting injection packers do not over-tighten, it should be possible to initially tighten the packer by hand and then use a spanner to ensure a tight seal has been achieved.

When drilling large numbers of holes ensure that drill bits are changed regularly so that the drilled hole size is consistent.

Injection Packers are available in three sizes -

- 80mm Aluminium Injection Packer (50 Pack)
- 100mm Aluminium Injection Packer (50 Pack)
- 140mm Aluminium Injection Packer (50 Pack)

Injection packers are designed for professional use only. Do not attempt high pressure resin injection unless you are suitably qualified or experienced.

Atomex Part No. AX/17-100-120
