Short Description

The Graco 112634 PRO Wash systems comply with the most stringent air quality rules in effect, including SCAQMD Rule 1171. The automatic, closed washing system prevents solvent emissions release and protects employees from solvent contact and fumes.

Description

Graco 112634 Pro-Washer Automatic Gun Cleaner is an automatic air spray gun washing system, simply finish spraying, tip the paint out of your gun, place the gun inside the gun washer, shut the lid and press the start button.

The Graco Pro Gun Washer is fitted with a Graco Husky 307 Double Diaphragm pump that sprays thinners inside the tank through various jets. You can leave the gun inside the wash tank while you do something else. The unit will recycle the thinners leaving the paint residue at the bottom of the catch tank while the lid stops your thinners from evaporating.

The unit can clean two guns at once, simply fit the trigger clip onto the gun to keep the trigger open, invert the gun over the vertical washer jet, thinners will be pumped through the gun and a fine mist of thinners will be sprayed on the outside of your gun washing away any paint on the outside of the gun.

These units will save your hours of cleaning and thousands of dollars of thinners wasted when cleaning guns. Always ground the unit before use and DON'T SMOKE near the unit when running or opening the lid as the solvent vapours are highly combustible.

GRACO 112634 Pro-Washer Standard Gun Washer Features-

- Cleans 2 guns and 2 cups
- Plastic tank and reservoir
- High quality Graco pump for reliability
-

Graco Part No. 112634
