Short Description

Pilot Air K50 415 Volt Air Compressor is ideal for static workshop applications where 415 Volt or three phase power is available. Suited for car mechanical workshops with 3-5 work bays or small/medium smash repair shops.

Description

Pilot Air K50 415 Volt Air Compressor is ideal for static workshop applications where 415 Volt or three phase power is available. The K50 is built tough here in Australia for reliability and longevity. This is the ideal size three phase air compressor for mechanical workshops, small to medium smash repair shops or any workshop that requires free air delivery up to 31 CFM.

Please be aware before purchasing a 415 Volt Air Compressor that you will need to install a dedicated power circuit. Check with our office for the exact requirements of the circuit needed for the model chosen.

We also recommend the use of a refrigerated air dryer with filters to ensure that you achieve the very best air quality. Refrigerated air dryers will remove water from your air supply which can damage air tools and other air equipment. Speak to our staff for the right advice.

Pilot Air Compressors are the benchmark for quality and reliability in Australia.

This item is excluded from free delivery, please contact our friendly customer service on 02 9644 1040 or info@airless.com.au for shipping quotation.
